

## Group Activity (15 minutes)

### I. HAZARD IDENTIFICATION WORKSHEET

This activity will help you begin the hazard assessment process. The Hazard Identification Worksheet is designed to help you identify the hazards that impact your community, and assign a general likelihood of occurrence to those hazards. This activity will require you to work from your current base of knowledge in consultation with other participants; you are not expected to conduct outside research at this time.

In the table below, list the hazards that could affect your community. Next to each listed hazard, place a checkmark or X in the column that best represents the general likelihood of that hazard occurring in your chosen location: likely, possible, or less probable. Select only one answer for each hazard.

HAZARD IDENTIFICATION & PRELIMINARY ASSESSMENT			
Community Name:			
Hazard	Likely	Possible	Less Probable
<b>EXAMPLE:</b> SNOW STORM / BLIZZARD			x

Use the information you have recorded here to help you complete the next activity: **II. Hazard Profile Worksheet.**
